Scientists create GM 'Frankenfish'

Written by Administrator Wednesday, 16 June 2010 17:55

According to the UK <u>Daily Mail</u>, scientists have created a genetically modified 'monster' salmon which could soon be on dinner tables around the world.

U.S. company AquaBounty claims it has been given initial approval by American safety authorities to produce the GM fish which grow two to three times faster than normal varieties. The fish convert their feed to muscle much more quickly and can be killed for the table at a younger age, assuring producers bigger profits.
